

Results of the survey on the relationship between private higher education institutions and accreditation

Karl Dittrich

7 May 2009

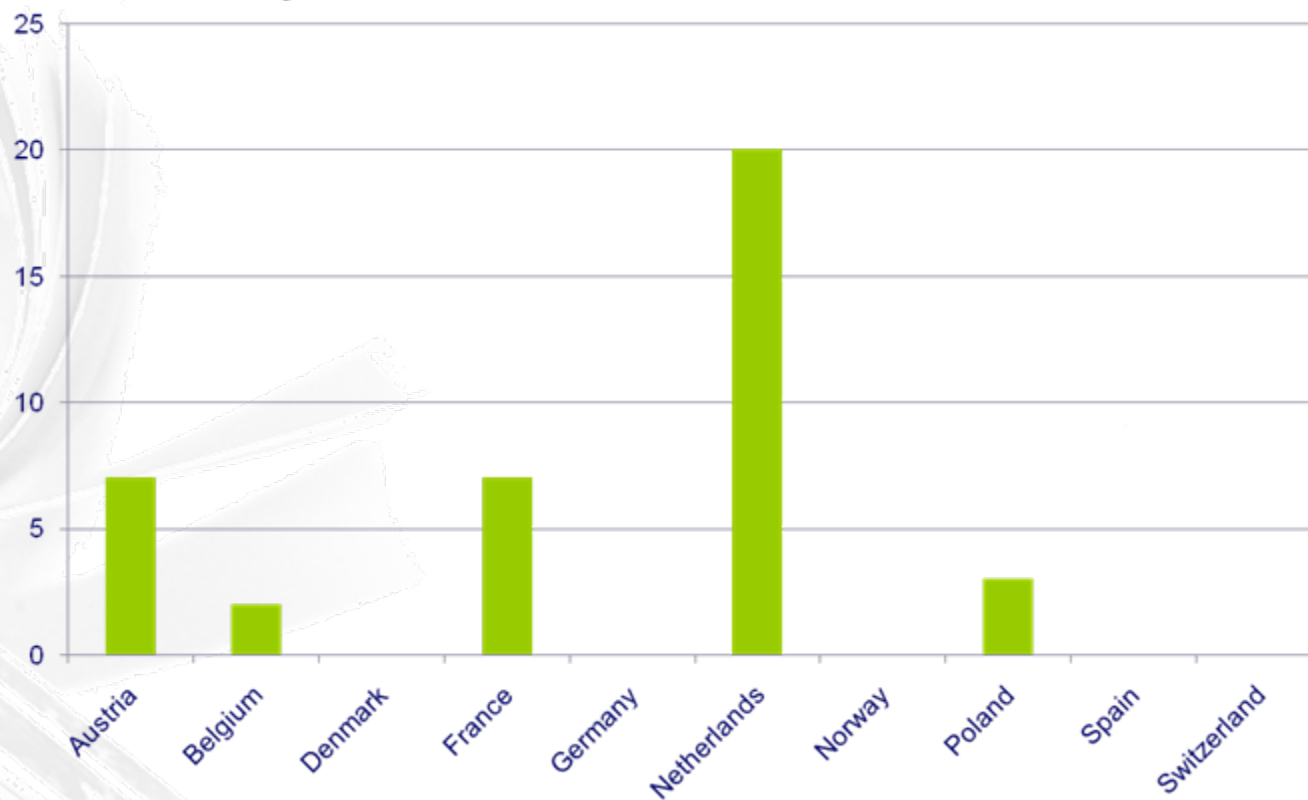

nvao

nederlands- vlaamse accreditatieorganisatie

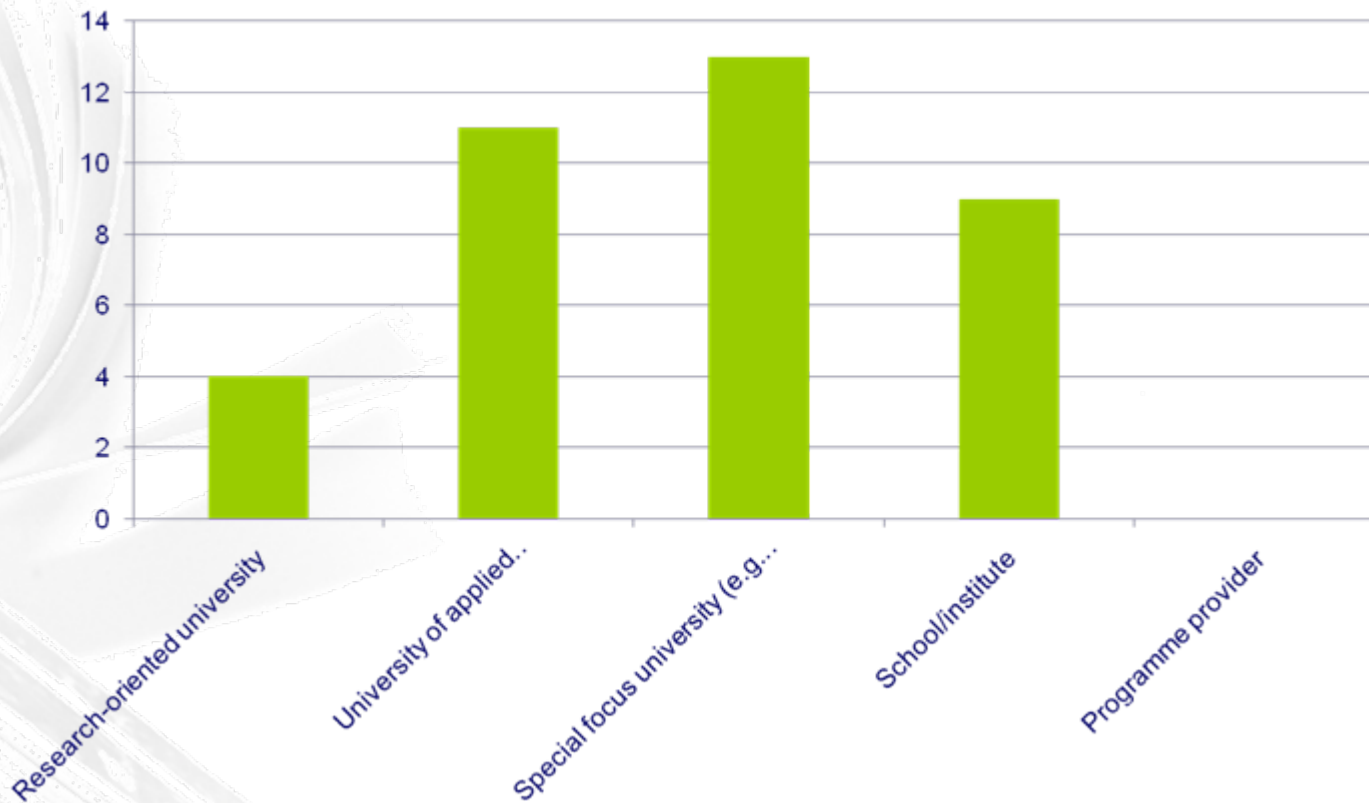

Introduction

- Unfortunately, quite low response, especially from Poland
- Worthwhile to complete survey with participants from other countries
- Be careful about results!

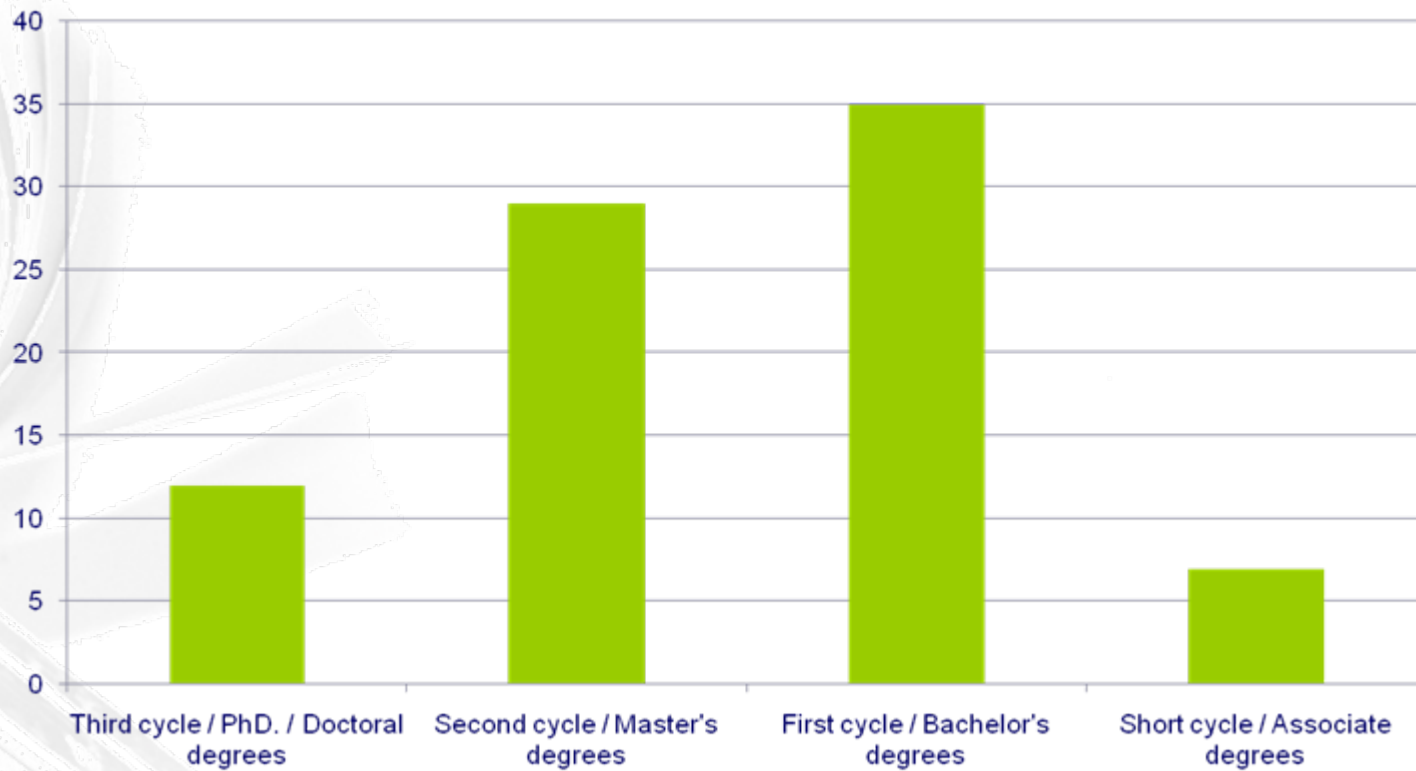

Country

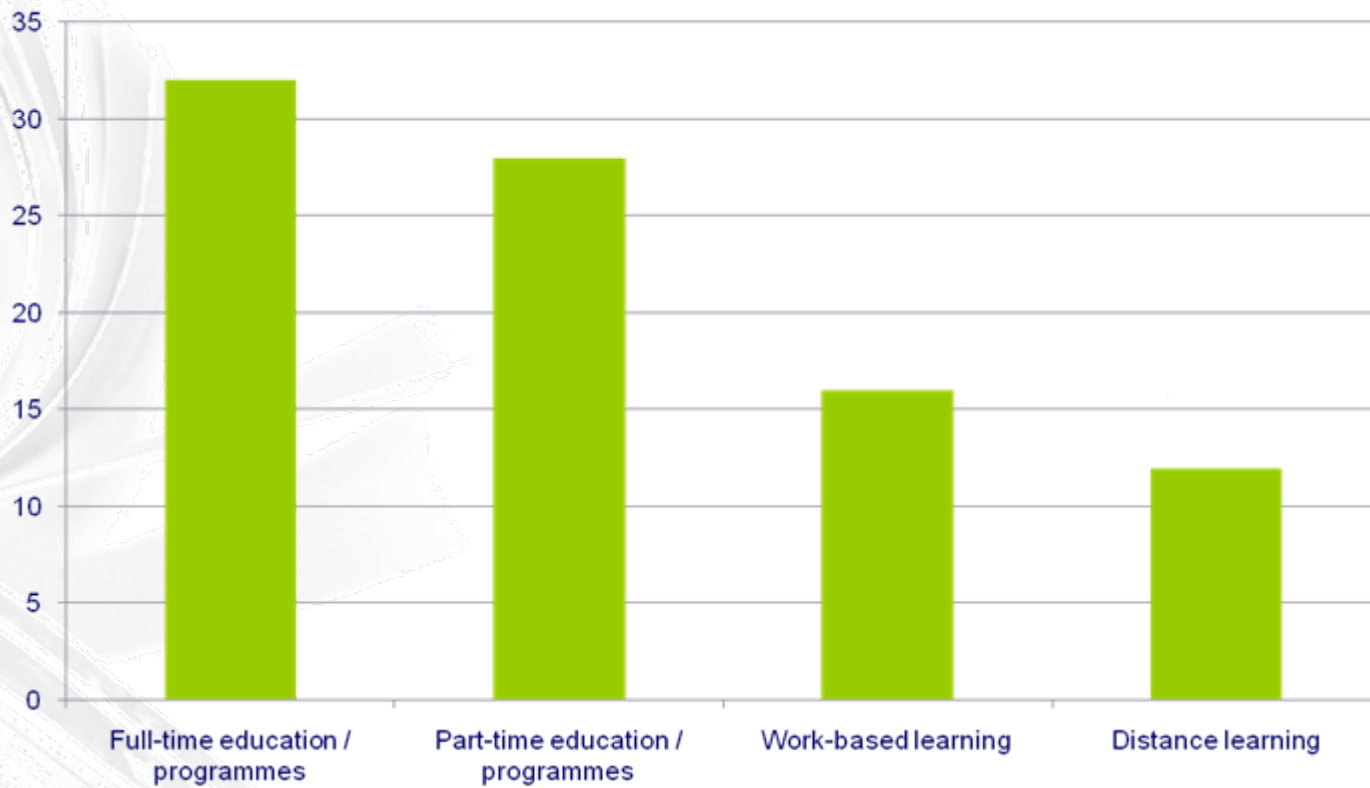

Type of HEI

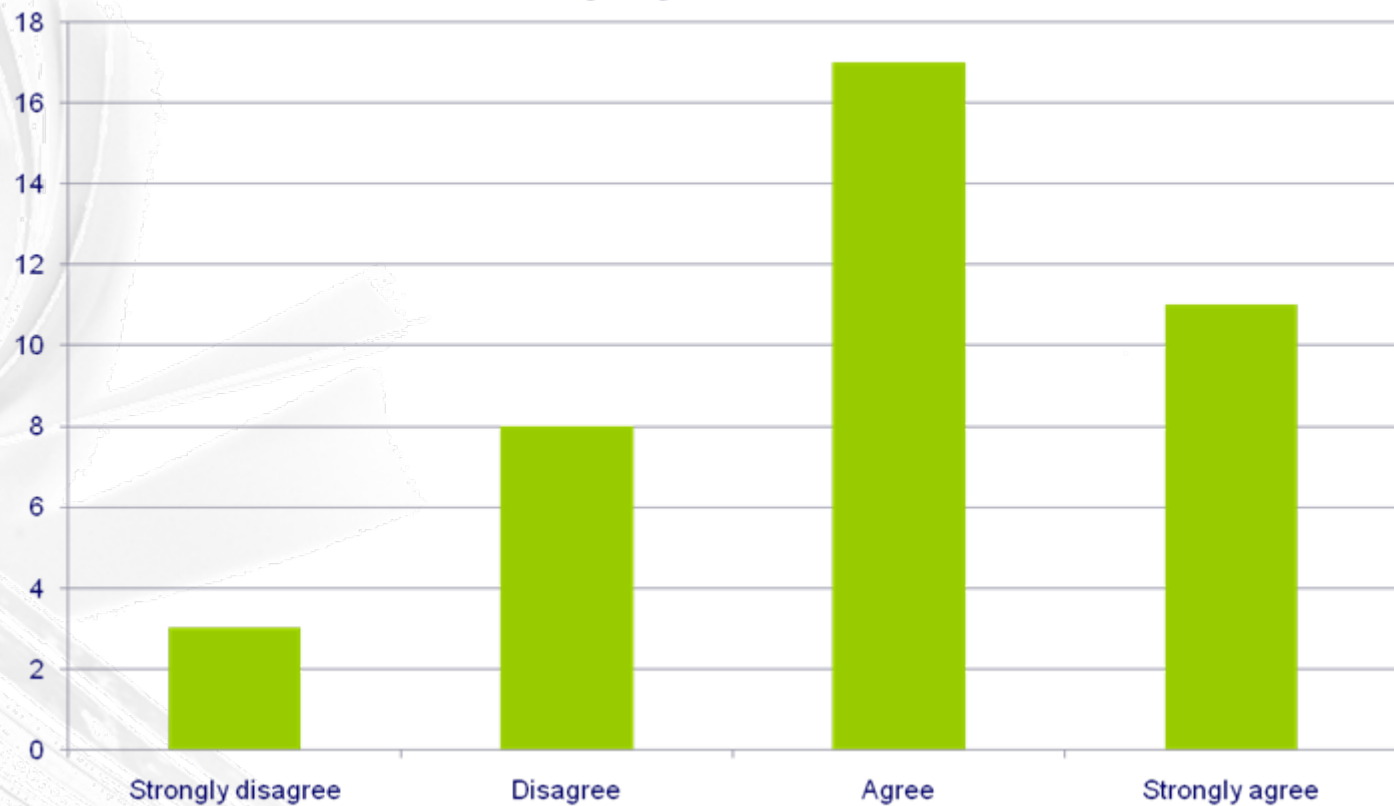

Type of degrees awarded

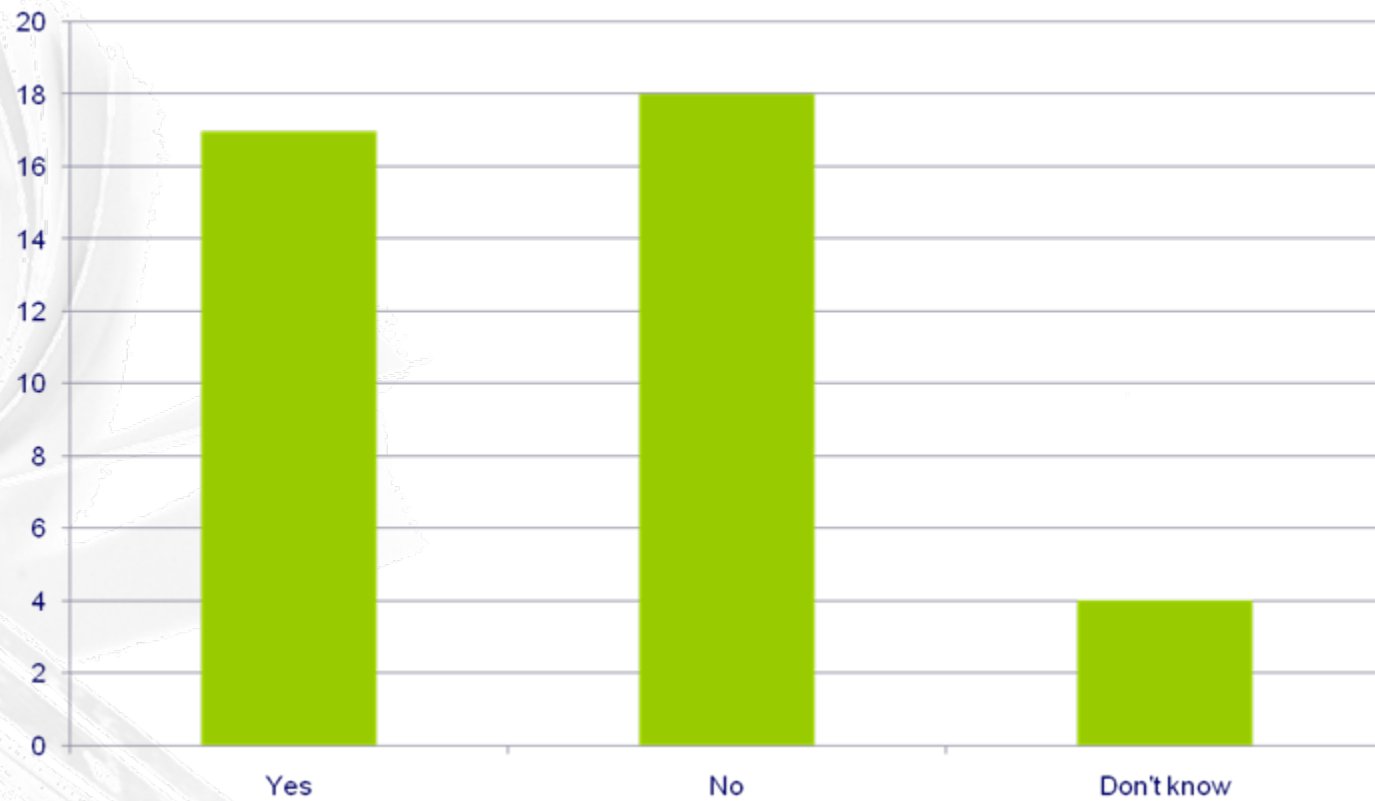

Type of education offered

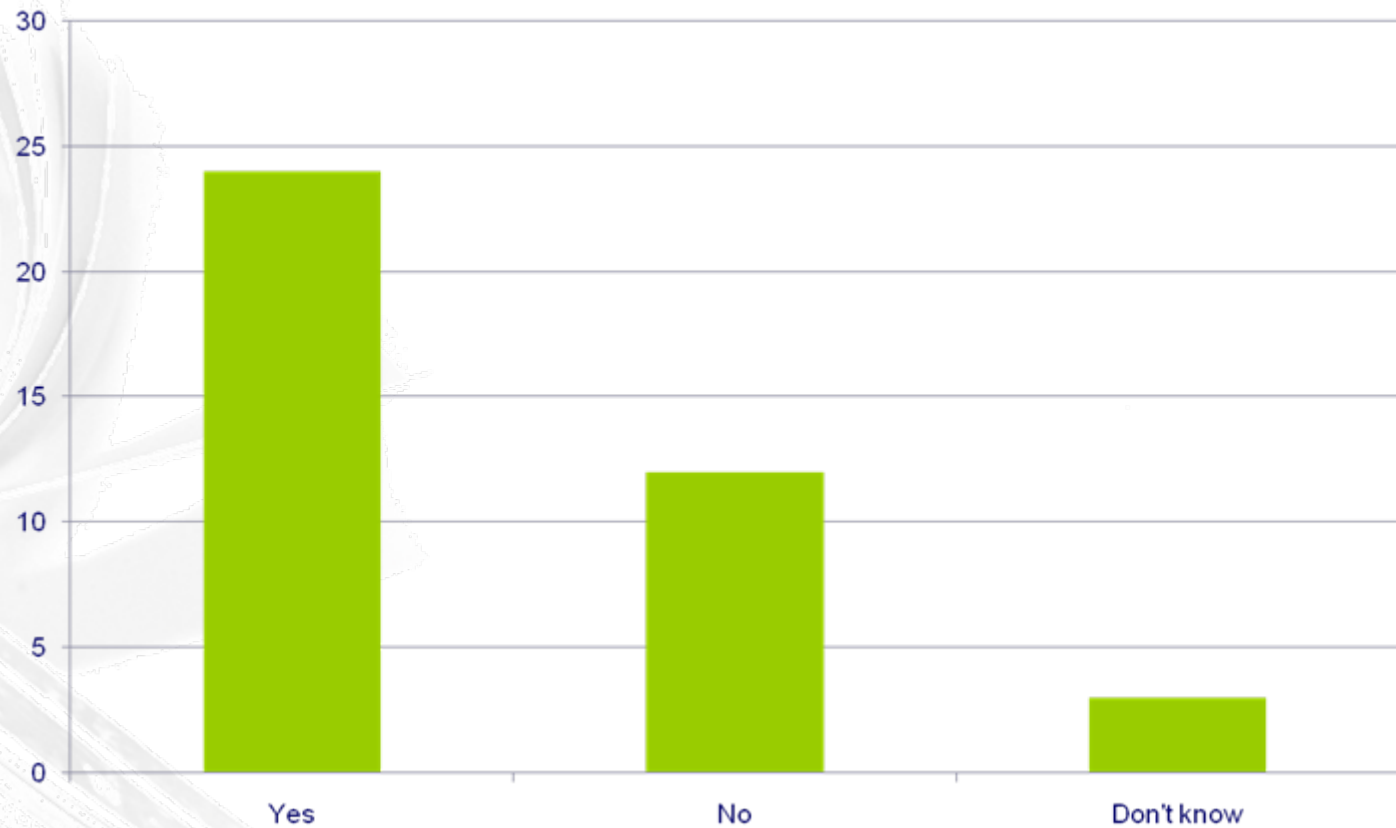

Tailor-made progr. in close cooperation with employers

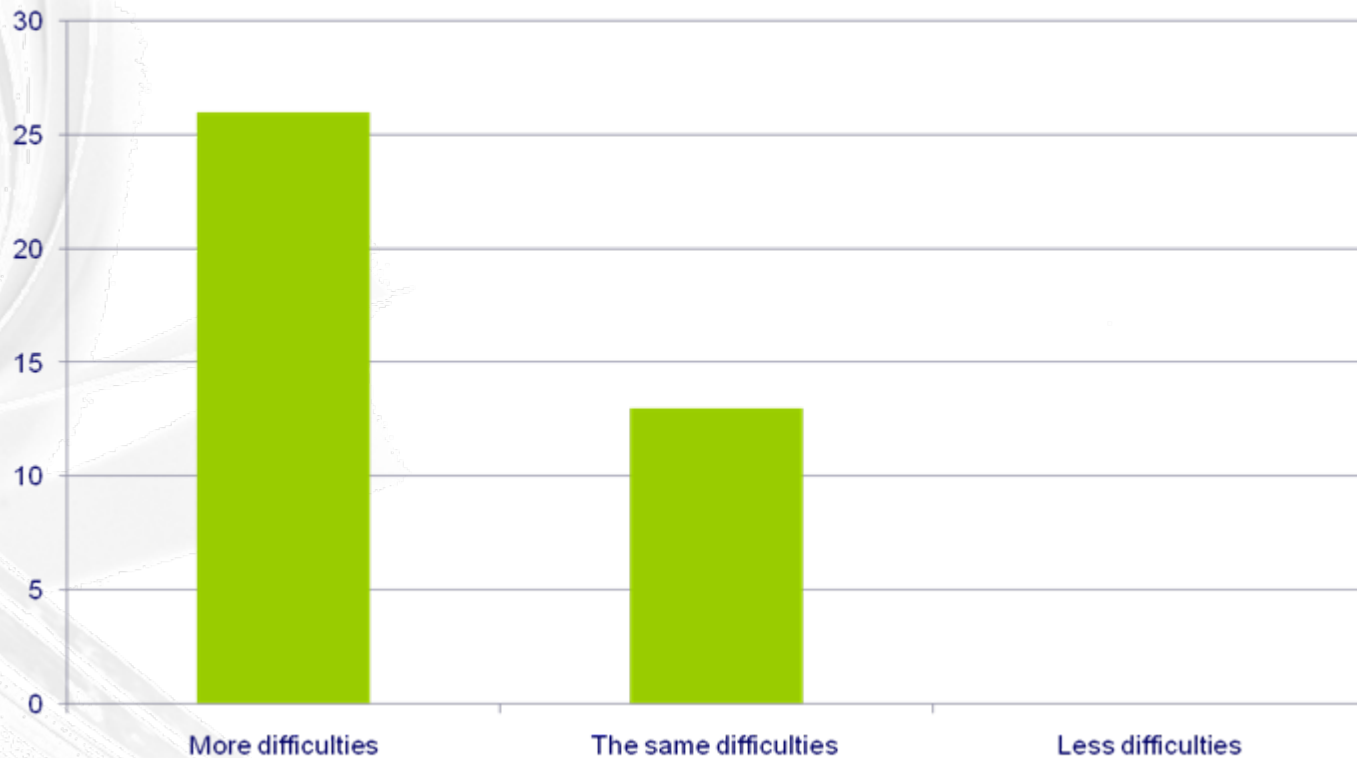

Students are generally working

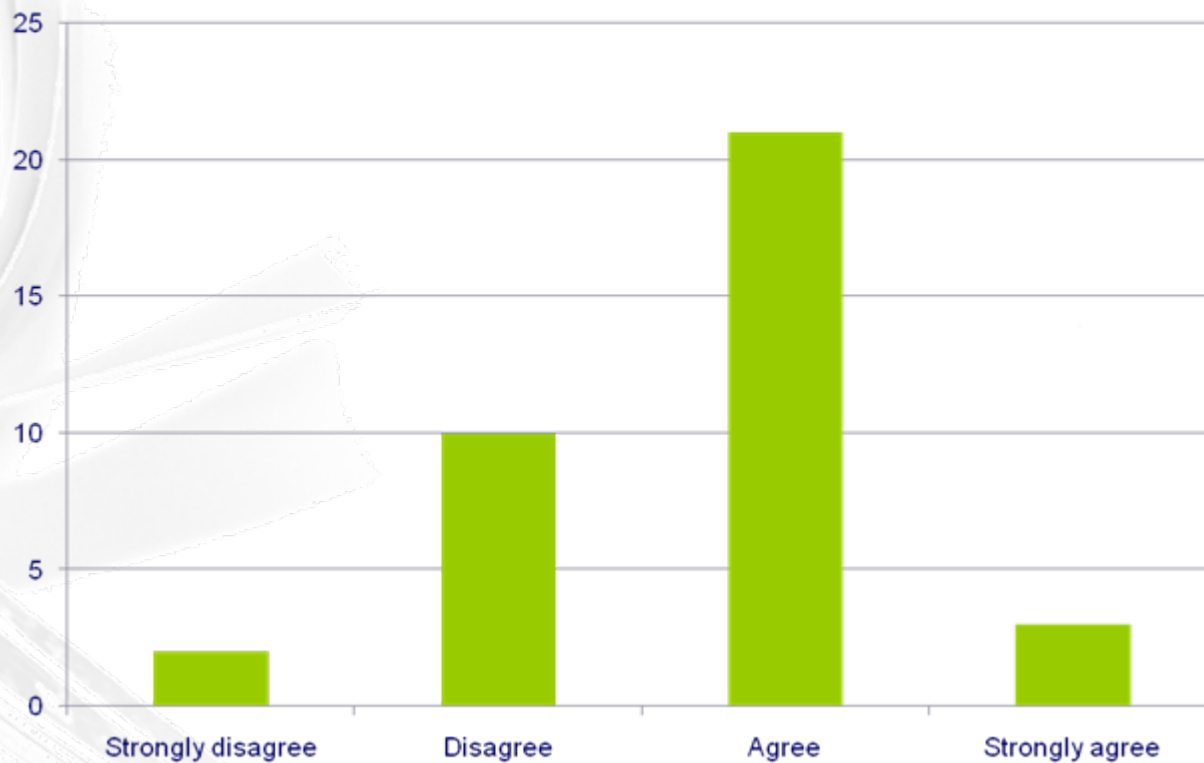

Other forms of QA before current system

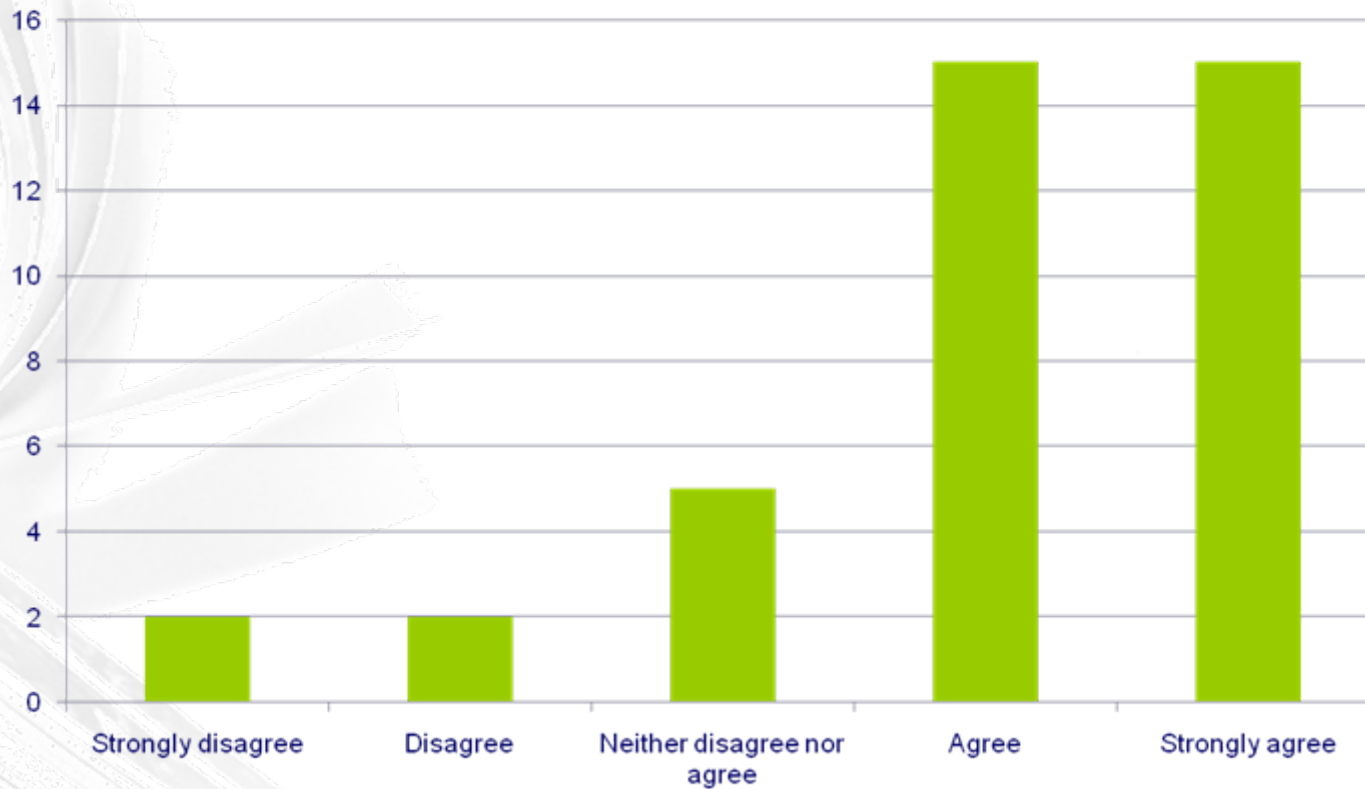

Difficulties compared to public HEIs in getting accredited

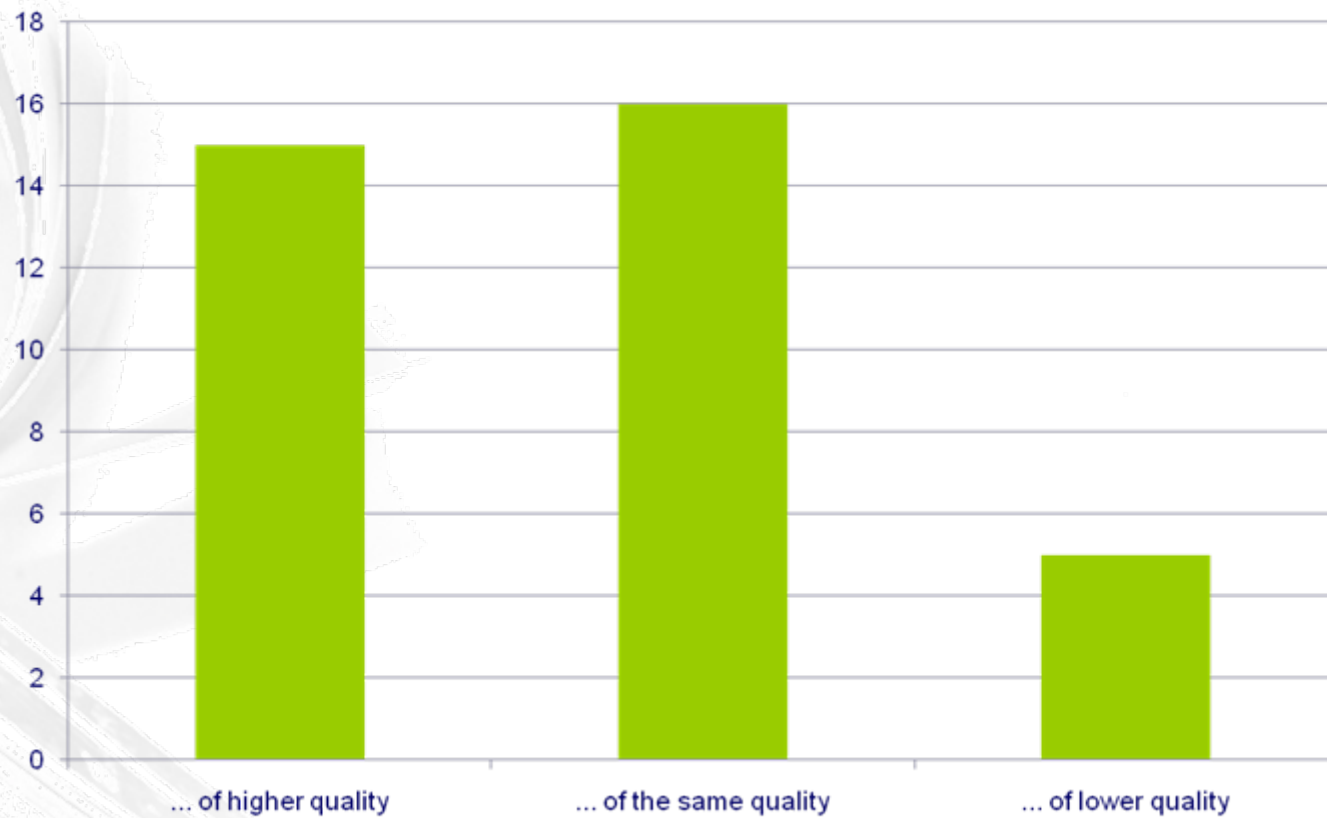

AO understands characteristics private HEI well

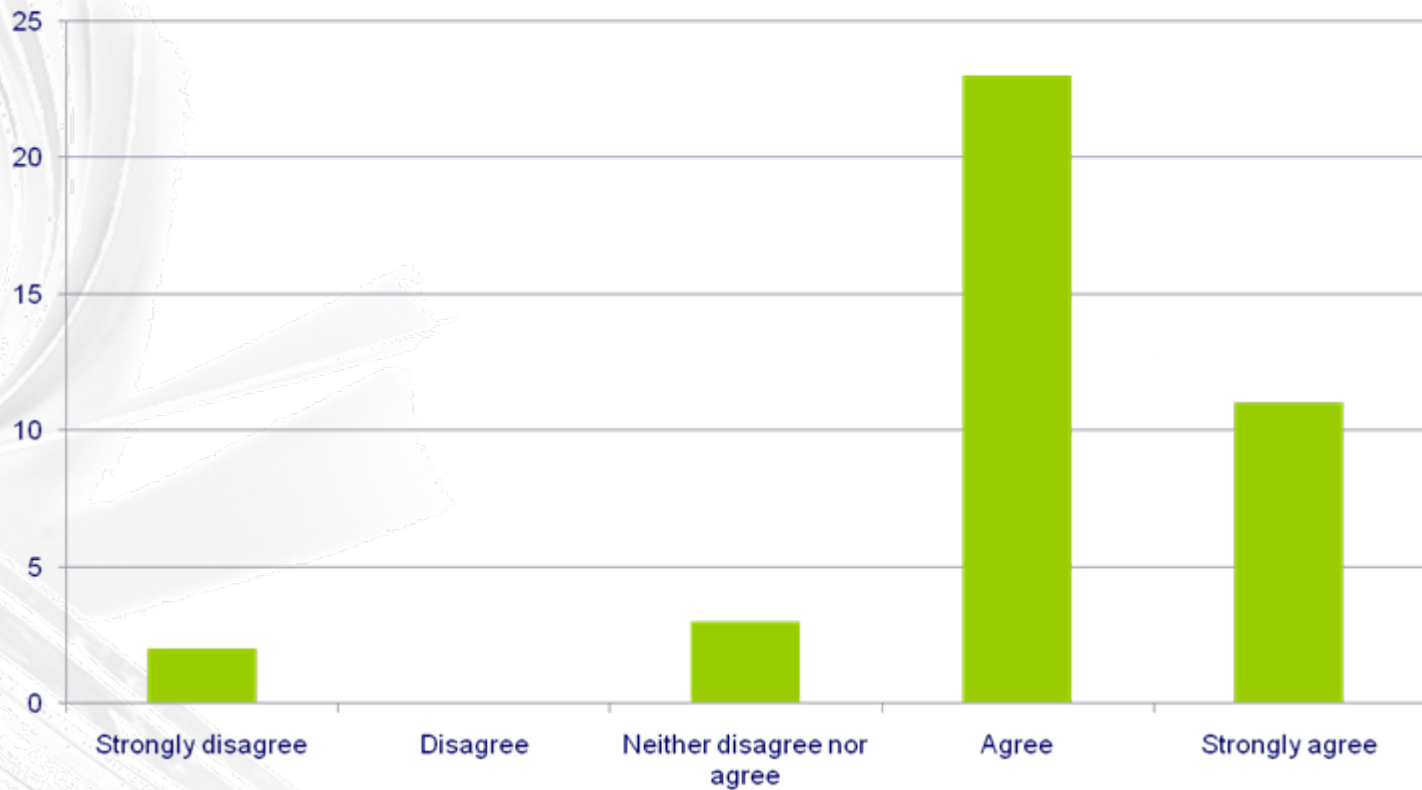

Panel should have members with experience in private HEIs

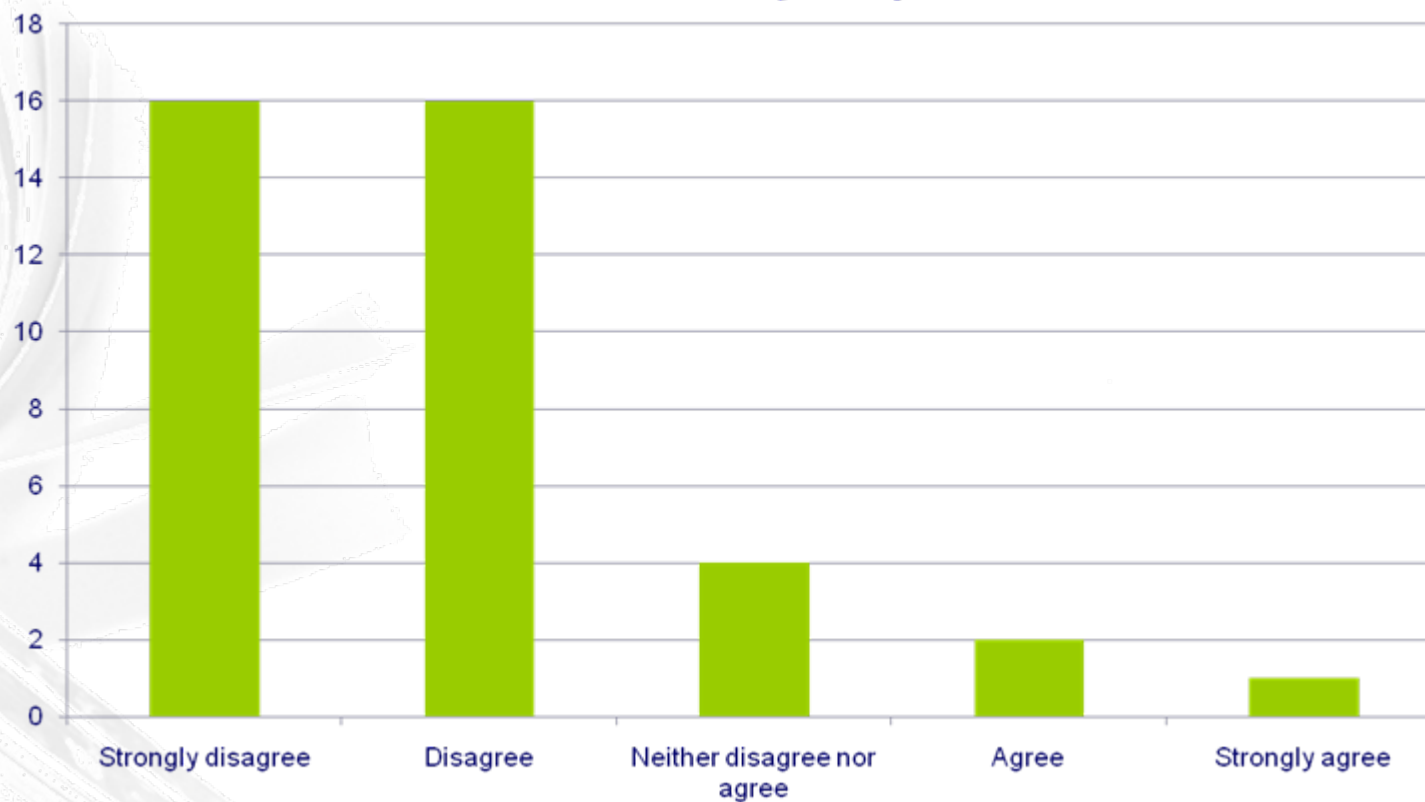

Public HEIs vs. private HEIs

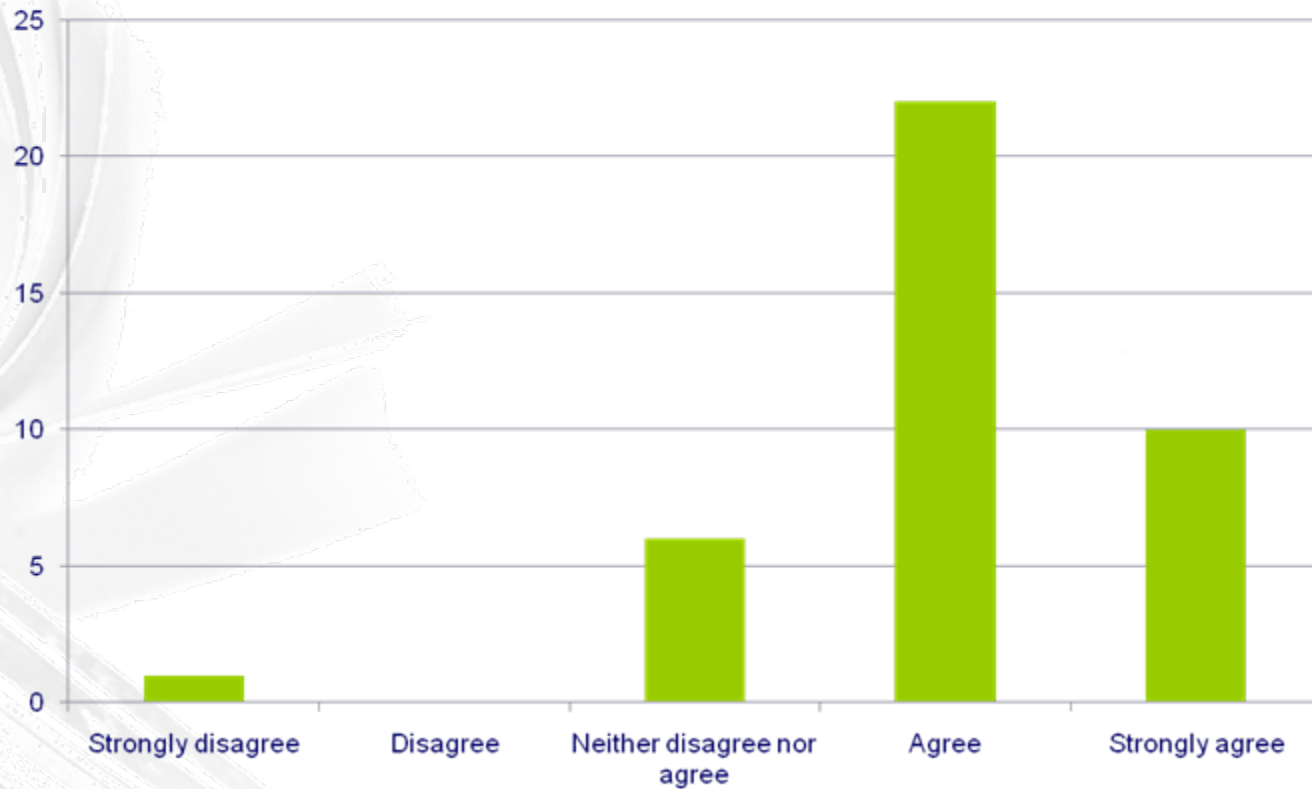

Accreditation has positive influence on quality education

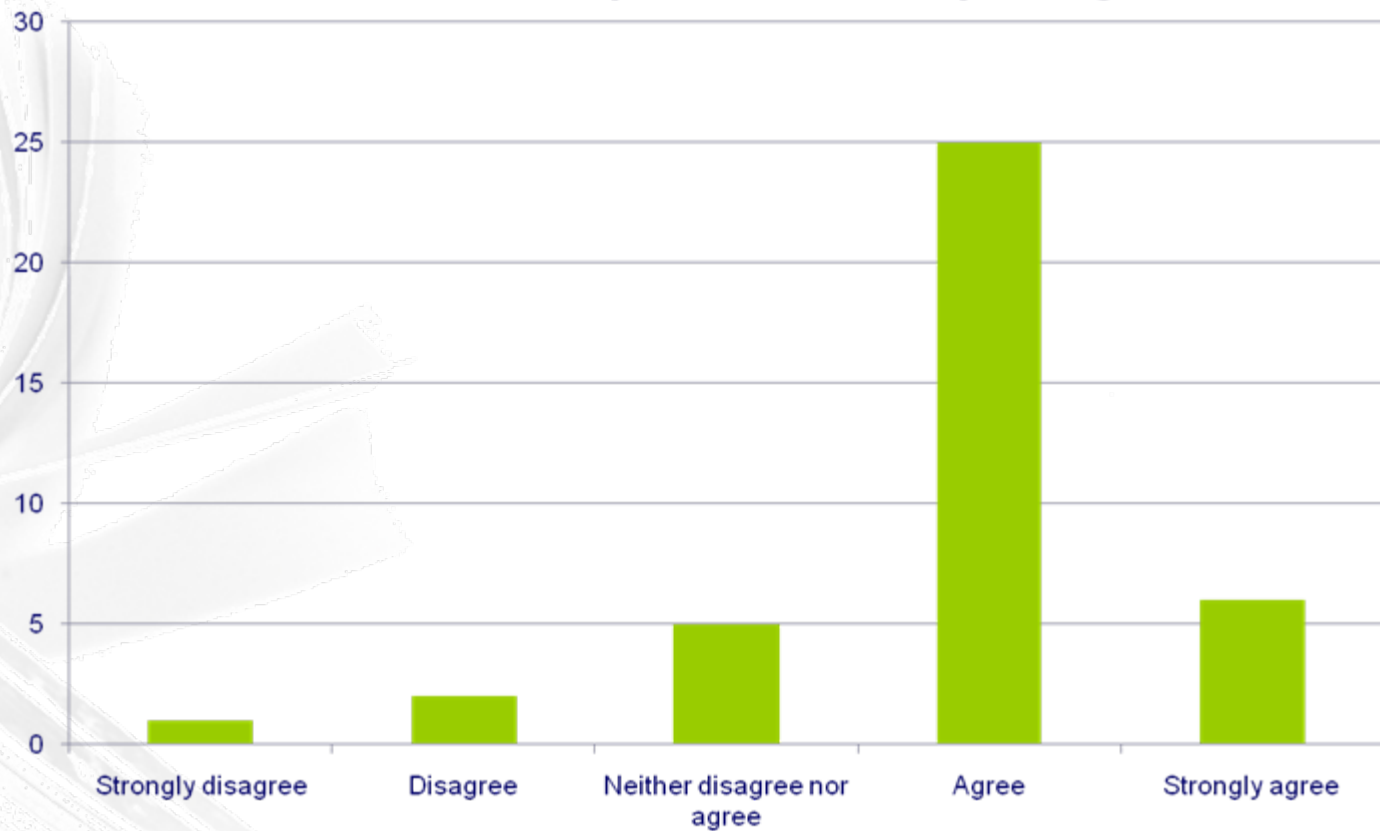

Accreditation is unnecessary for private HEIs

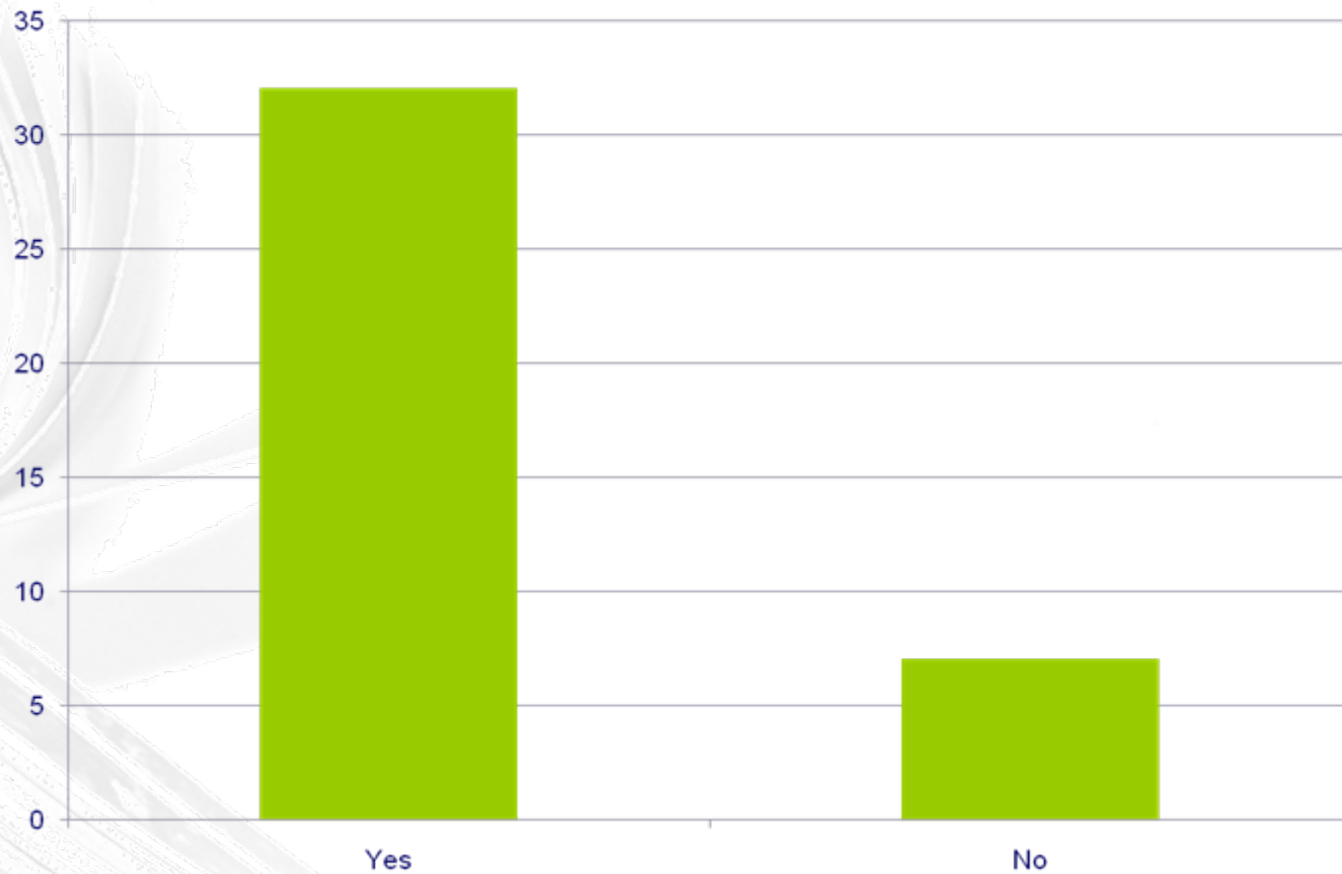

Glad accreditation for private HEIs is obligatory

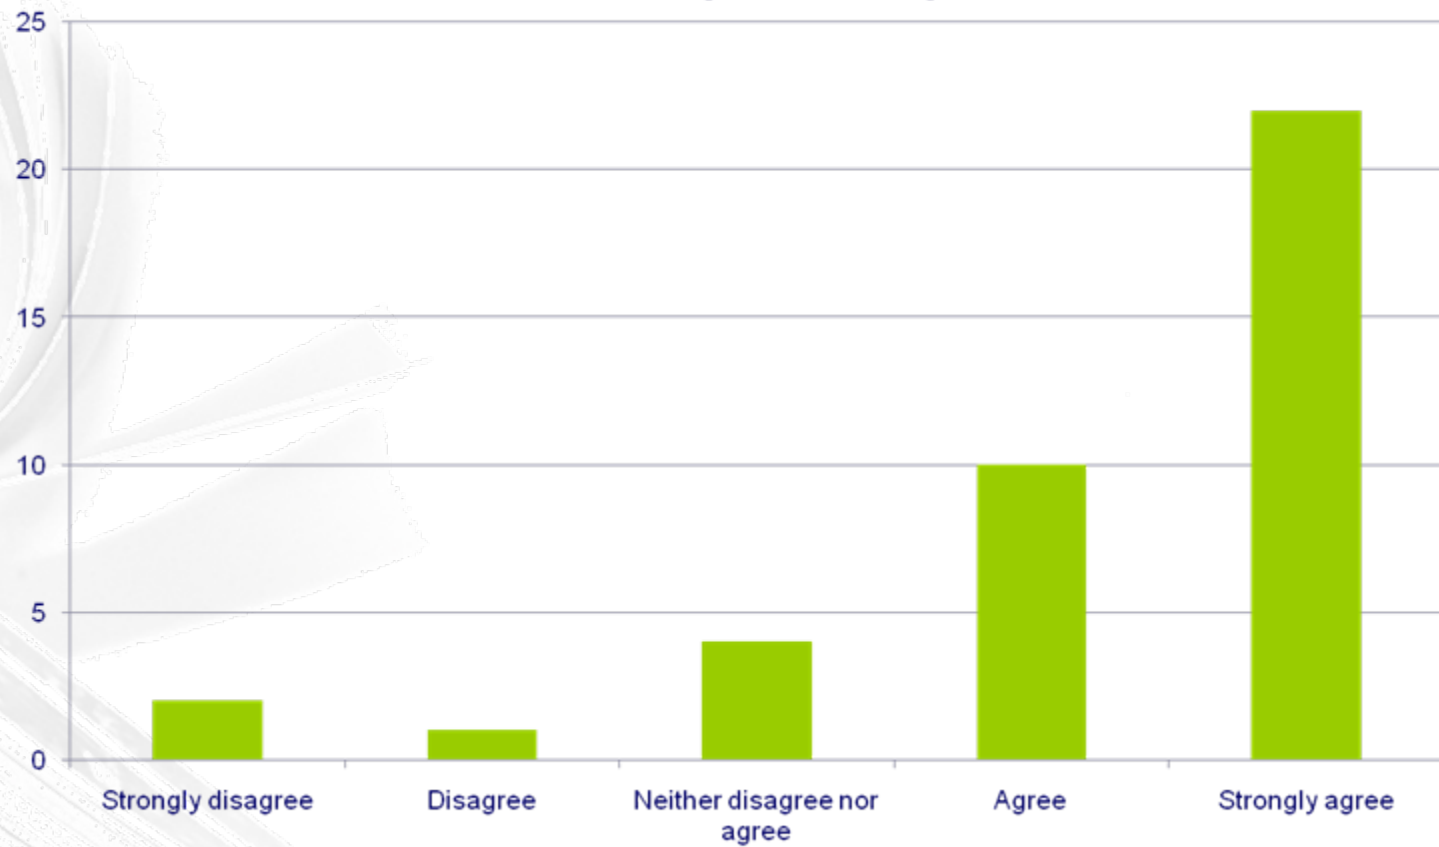

Accreditation will help contribute to prestige

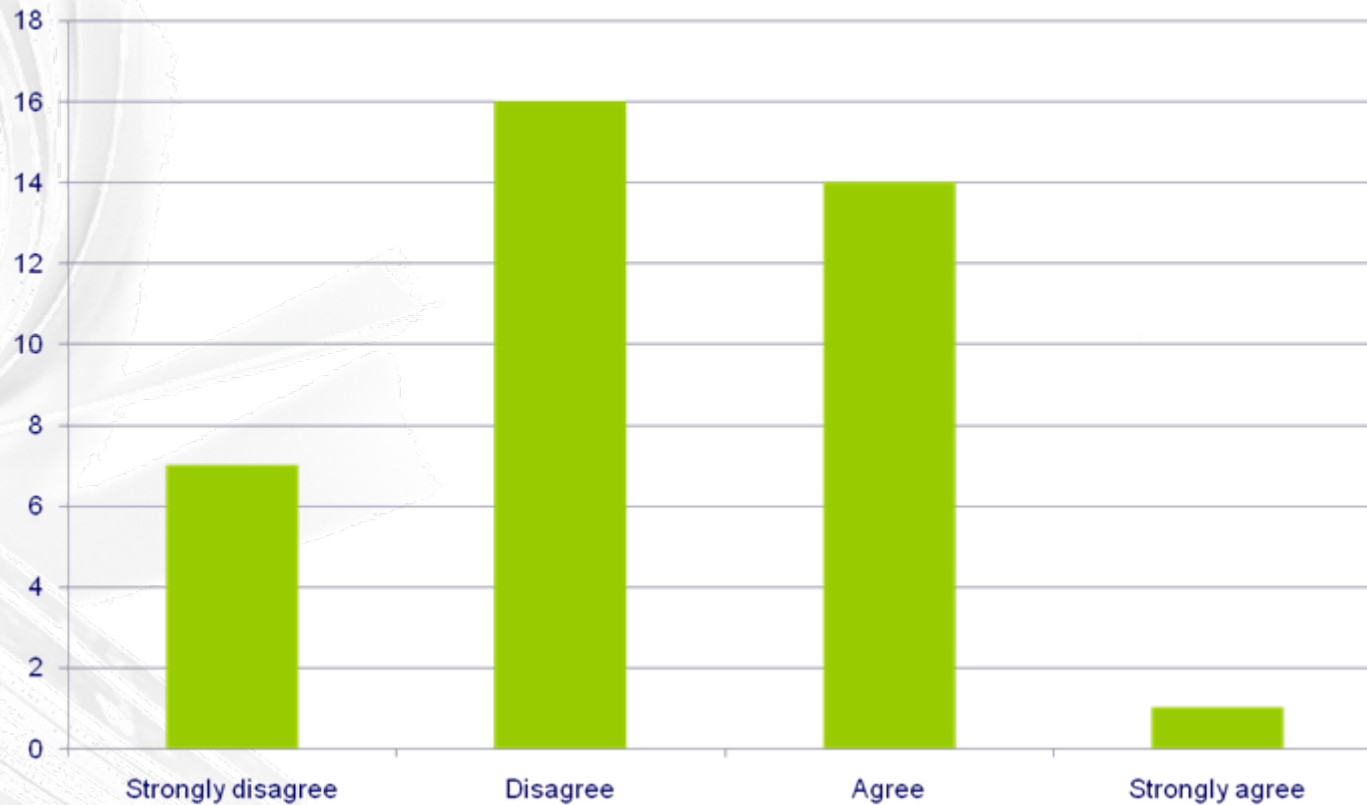

Accreditation used in marketing

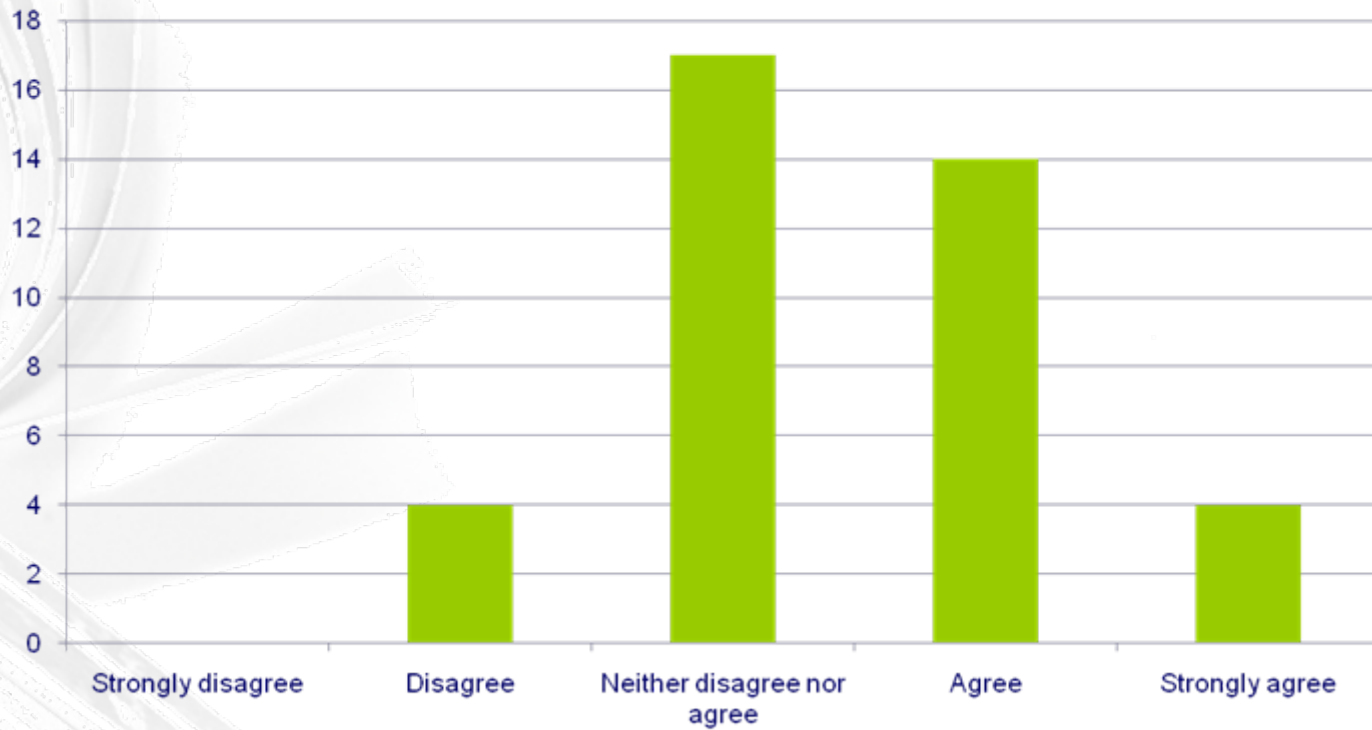

Internationalisation is important topic

Academic values are not fully compatible with needs private HE

More and more cooperation between public and private HEIs

CONCLUSION

- “with all restrictions about number of responses and unrepresentative survey”:
- responding HEI’s accept external QA
- responding HEI’s think accreditation leads to quality improvement
- experts in “private HEI’s” are desirable
- international cooperation is an important topic

Thank you for your attention
